Frame

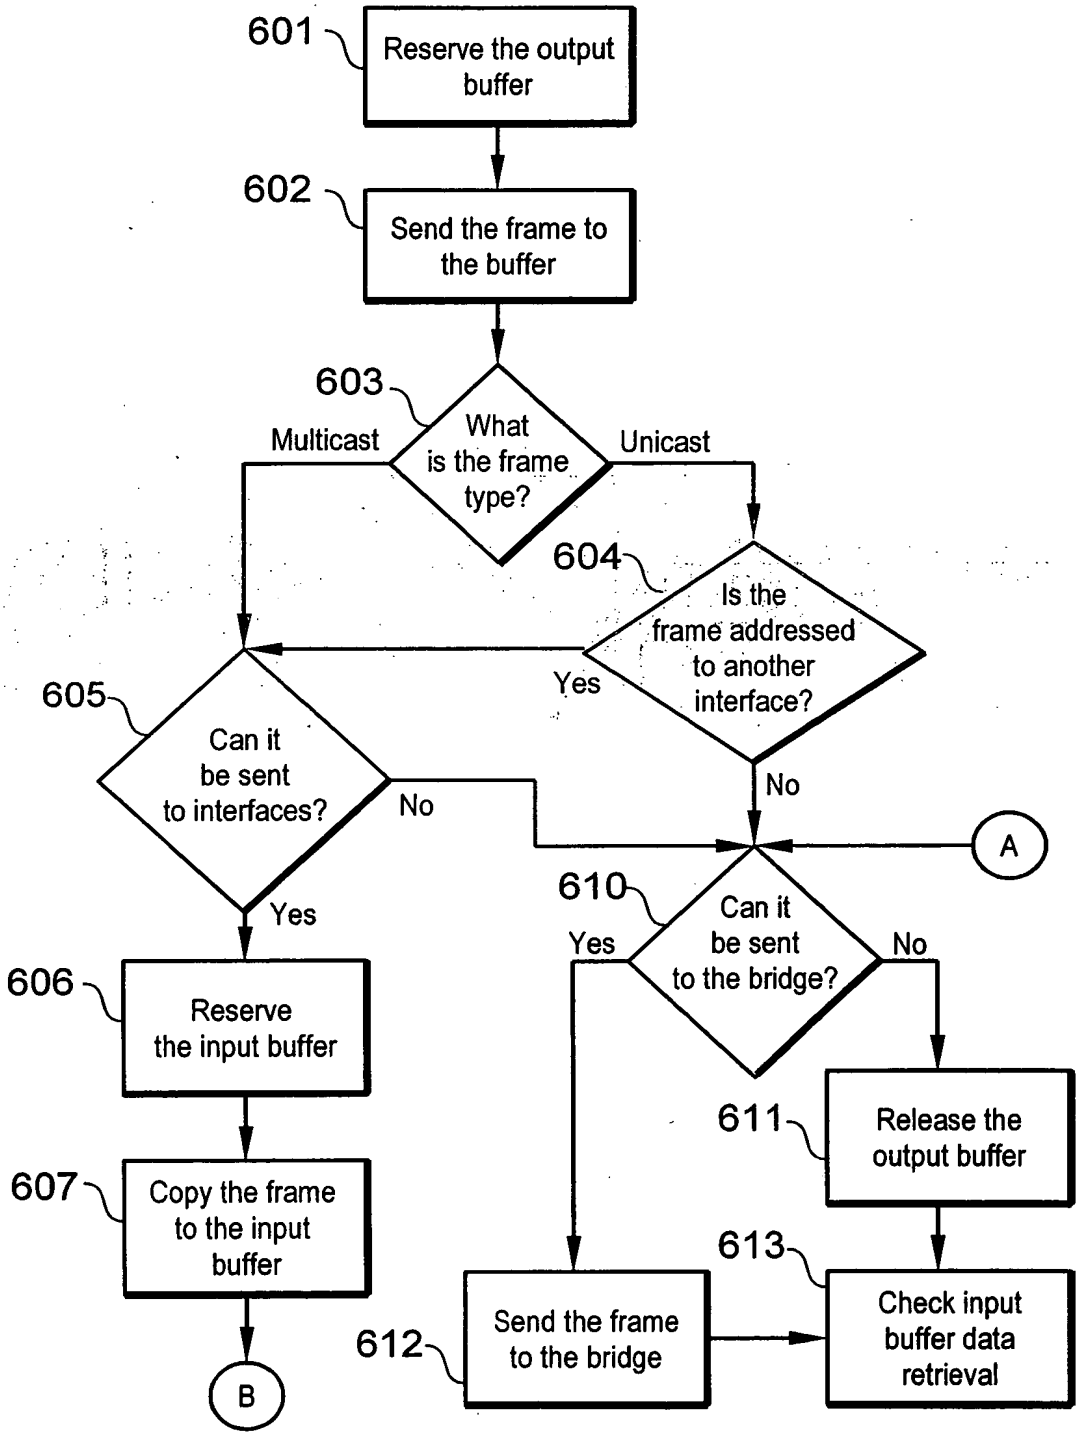
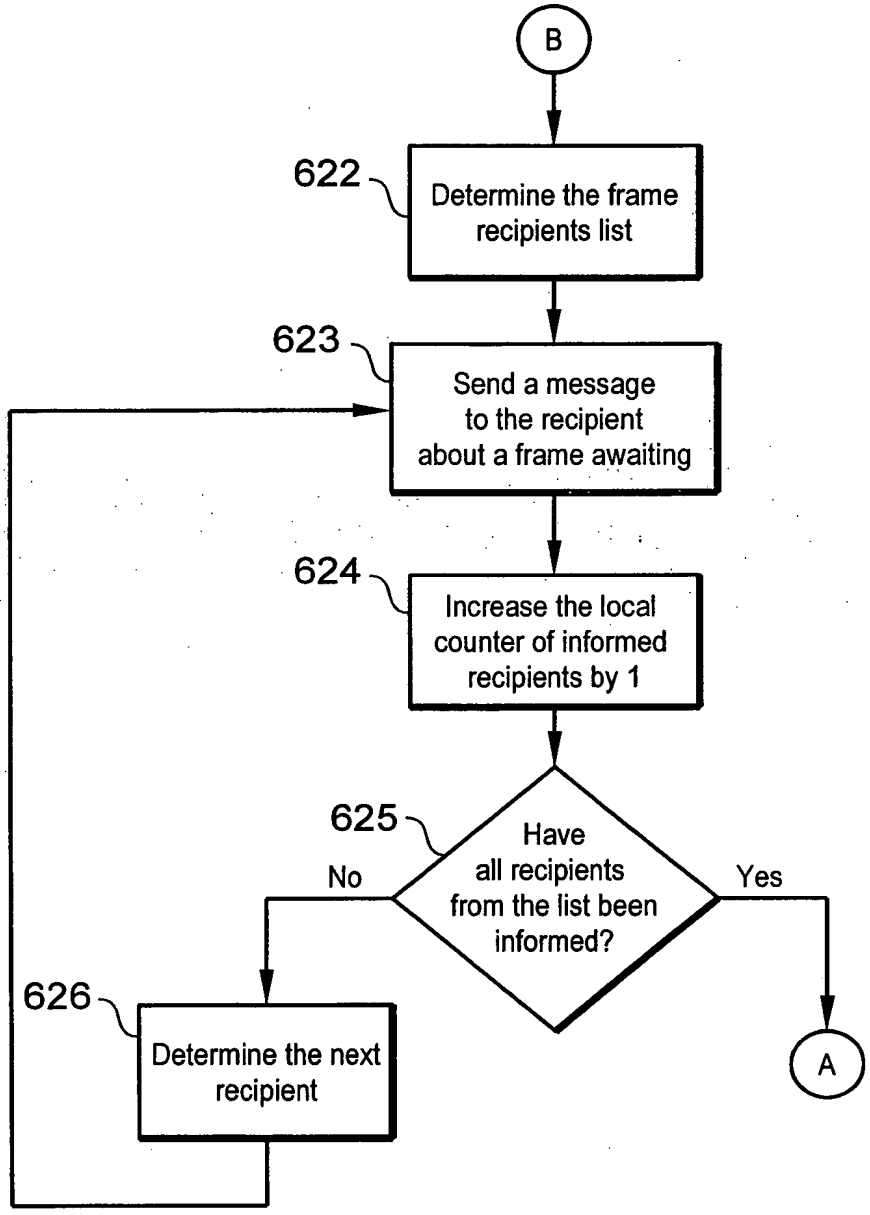
Fig. 6



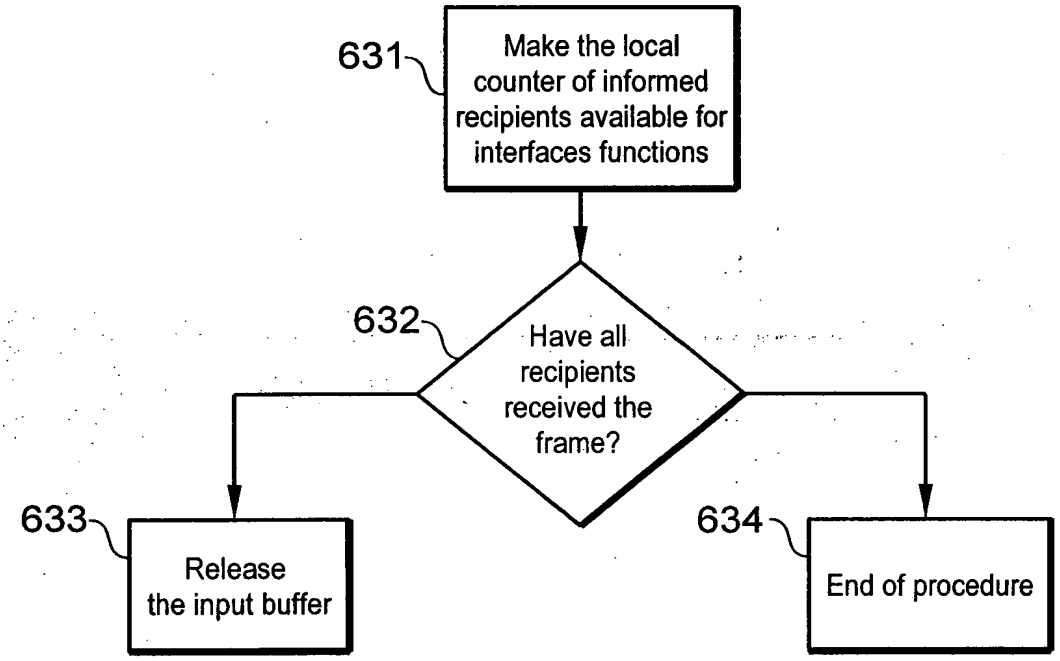
601
Reserve the output buffer
602
Send the frame to the buffer
603
What is the frame type?
Multicast
Unicast
604
Is the frame addressed to another interface?
Yes
No
605
Can it be sent to interfaces?
No
Yes
A
610
Can it be sent to the bridge?
Yes
No
606
Reserve the input buffer
607
Copy the frame to the input buffer
B
611
Release the output buffer
613
Check input buffer data retrieval
612
Send the frame to the bridge

Fig. 7A



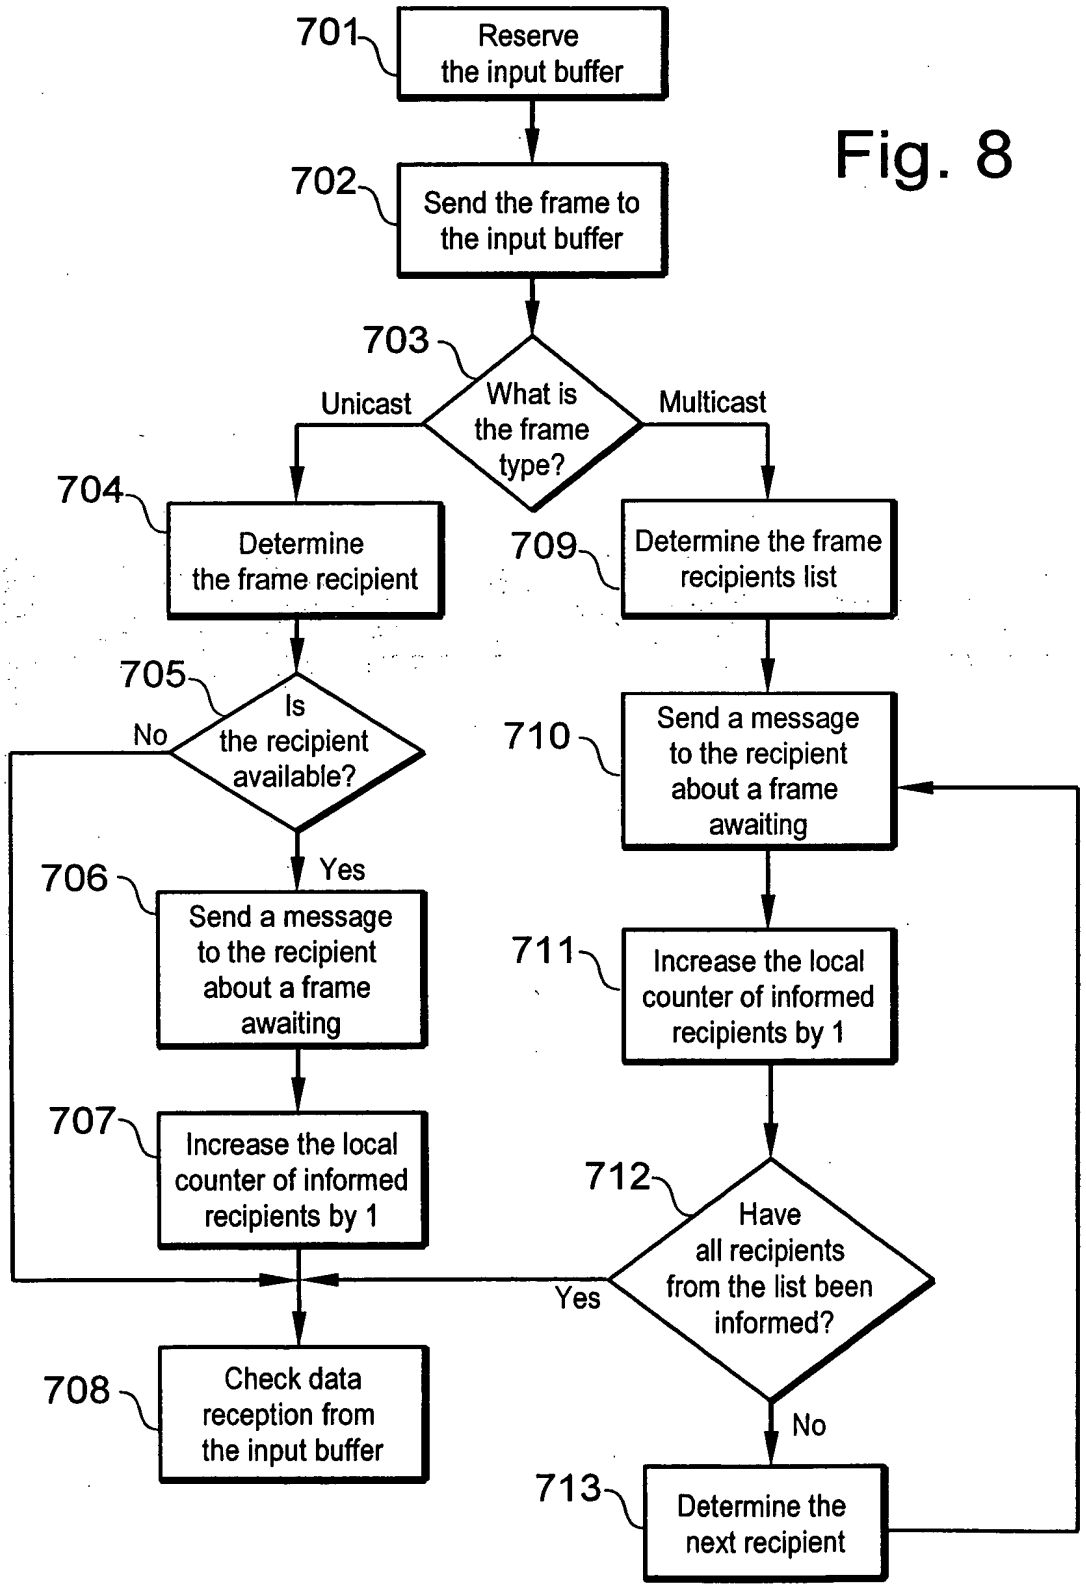
B
622
Determine the frame recipients list
623
Send a message to the recipient about a frame awaiting
624
Increase the local counter of informed recipients by 1
625
Have all recipients from the list been informed?
No
Yes
626
Determine the next recipient
A

Fig. 7B



631
Make the local counter of informed recipients available for interfaces functions
632
Have all recipients received the frame?
633
Release the input buffer
634
End of procedure

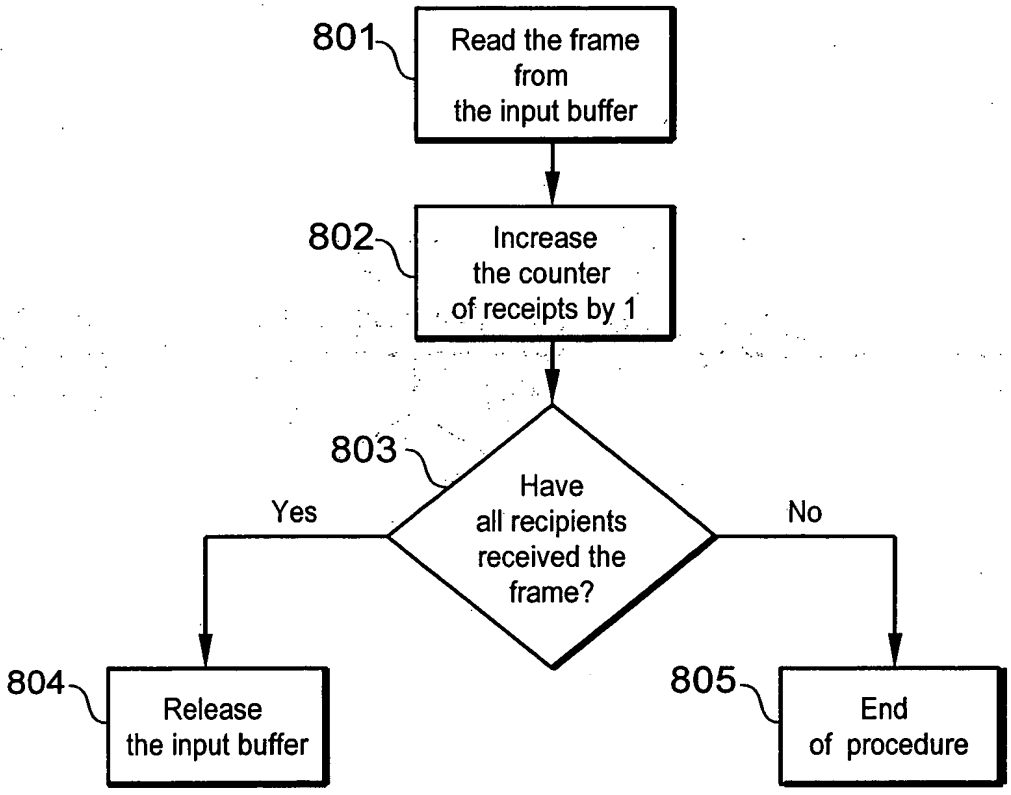
Fig. 7C



701
Reserve the input buffer
702
Send the frame to the input buffer
703
What is the frame type?
Unicast
Multicast
704
Determine the frame recipient
705
Is the recipient available?
No
Yes
706
Send a message to the recipient about a frame awaiting
707
Increase the local counter of informed recipients by 1
708
Check data reception from the input buffer
709
Determine the frame recipients list
710
Send a message to the recipient about a frame awaiting
711
Increase the local counter of informed recipients by 1
712
Have all recipients from the list been informed?
Yes
No
713
Determine the next recipient

Fig. 8

10



801
Read the frame from the input buffer
802
Increase the counter of receipts by 1
803
Have all recipients received the frame?
Yes
No
804
Release the input buffer
805
End of procedure

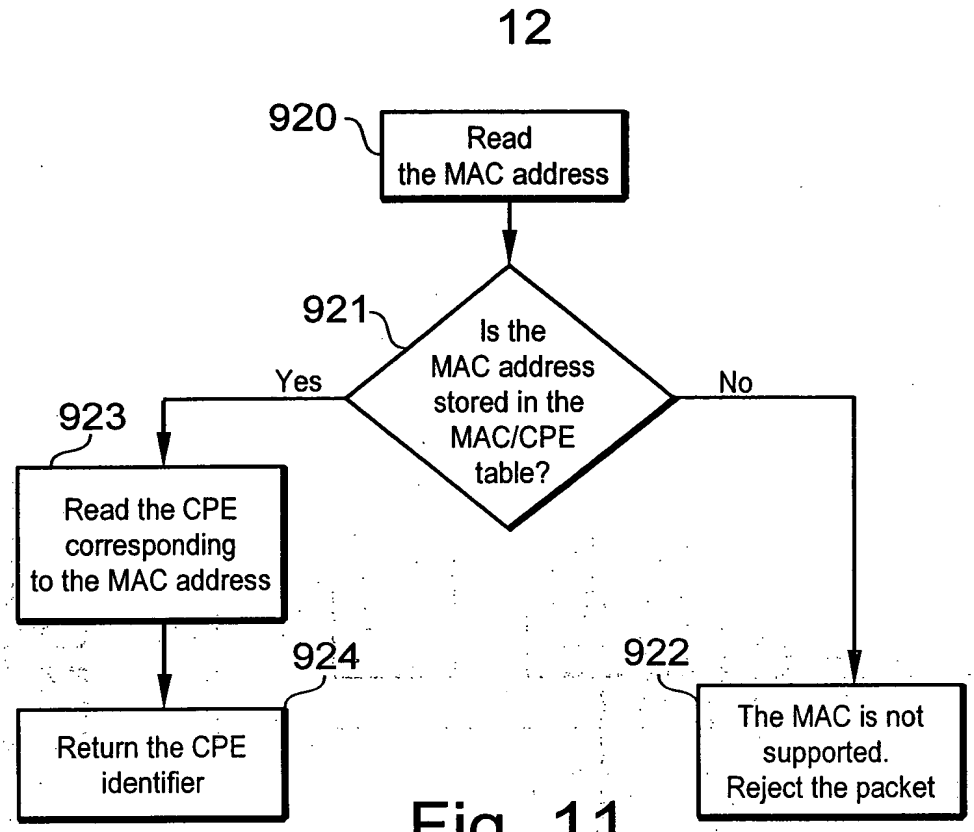
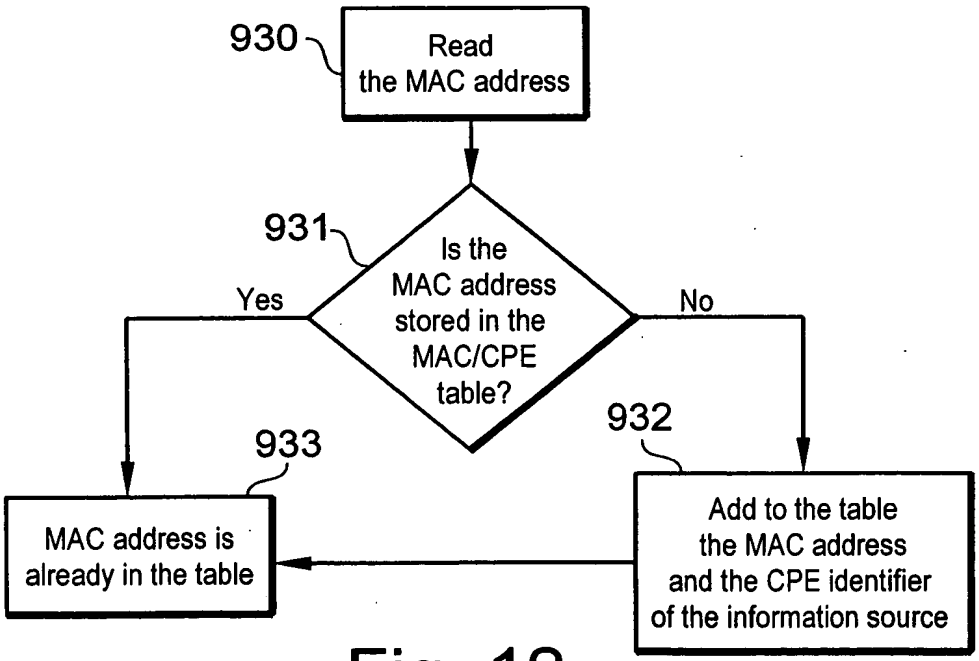
Fig. 10



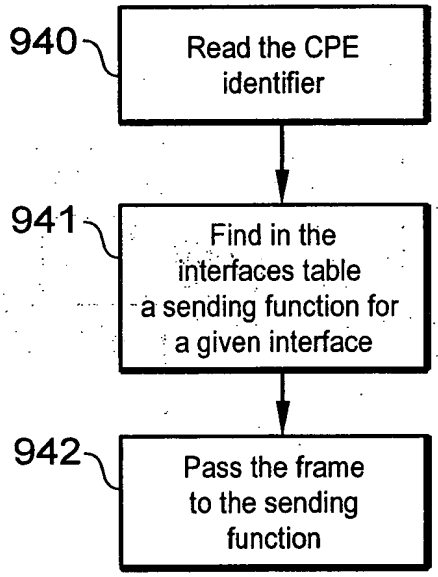
12
920
Read the MAC address
921
Is the MAC address stored in the MAC/CPE table?
Yes
No
923
Read the CPE corresponding to the MAC address
924
Return the CPE identifier
922
The MAC is not supported. Reject the packet

Fig. 11



930
Read the MAC address
931
Is the MAC address stored in the MAC/CPE table?
Yes
No
933
MAC address is already in the table
932
Add to the table the MAC address and the CPE identifier of the information source

Fig. 12



940
Read the CPE identifier
941
Find in the interfaces table a sending function for a given interface
942
Pass the frame to the sending function

Fig. 13
